Subversion: A quick conceptual introduction

IAN W.

10:02pm Apr 12, 2009

#3 by Ian C

[View revision](#)[Turn off highlighting](#)

SVN (Subversion) lets you save versions of files, or save the current state of a group of files and give that version a "tag". This allows you to incrementally save changes to your code.

Introduction – Why Version Control?

If you're reading this, chances are you already know why you should use version control. If you're still not convinced, perhaps someone recommended you read this guide. The case for version control usage is strong, and the reasons are many. To explain in an analogy: not using version control for website source code is like trying to edit a Word document in a team of 5 people without "track changes"; in very little time you'll have no idea who changed what, when, nor why, and in the same amount of time you'll have suffered avoidable bugs and worse, irreversible data loss. It's a fact – non-use of version control leads to more mistakes and ultimately failure as a team of developers.

This document tries to provide a practical how-to for getting started using SVN with Drupal.

1. Repository organization

You can organize your SVN repository in numerous ways, but it's best to stick to some type of formalized organization. Take the following organization for example:

```
theMIX.org  
/drupal/example.com  
/drupal/example.net  
/drupal/vendor
```

Anouncing Open Atrium on the blog

Description:

Bonnie,
How does this look:

Anouncing Open Atrium: an Open Source Intranet Package Powered by [Drupal](#)

Open Atrium (formally code name 8trees) is an open source intranet package by [Drupal](#) that si quick to install and open so you can start customizing it to meet your team's exact needs. All the code will be hosted on [Github](#) and available as an open beta in approximately 4 weeks.

Out of the box, Open Atrium lets you coordinate projects with your team wherever they are in the world - whether you're coordinatina programs around the world for an international organization.

Use case for PURL based iphone interface for Aegir

ADRIAN

5:06pm Thu Jun 4

Tagged: context hosting purl

As discussed in the meeting yesterday, it would be great if aegir could provide an iphone based user interface for remote administration of sites. One of the aspects that would help in this regard is that Aegir is designed to be 'whiteboxed', so it provides a (mostly) standard Drupal user interface.

This is a bit far off, as Aegir does not currently have views 2.x support, but these are the things I would like to be able to do :

1. View listings

The user should be able to log into their account, and be able to view the list of sites and the list of tasks for those sites.
